

Jermel Mosley

Jermel Mosley

MCSE/MCSA/MCP/NCDA/ Azure Fundamentals (AZ-900)/ Azure Administrator (AZ-104)

Sr. Systems Engineer

ABOUT ME: I am an analytical and articulate professional with more than 24 years of progressive experience in systems engineering and systems administration. I possess excellent written and verbal communication, organizational, prioritization, and documentation skills. I am an effective team leader with strong systems engineering and administration background. I interact easily with people of diverse professional and technical levels, backgrounds, and cultures. I am a proven technical professional with solid experience in many areas of cloud technology and virtualization, software support, server support and engineering, and systems administration. I am knowledgeable and innovative, with the ability to quickly learn and use new skills and applications. I adapt easily to diverse technical and operational environments. I possess excellent management skills, and manage application administration for software repackaging, deployment, and upgrades. I have a active DoD Secret clearance and I have earned the Microsoft Certified Systems Engineer, Microsoft Certified Systems Administrator, Microsoft Certified Professional, Net App Certified Data Management Administrator, Azure Fundamentals (AZ-900) and Azure Administrator (AZ-104).

Technical Skills

Network Administration, Software Upgrades, Software/Hardware Installation & Configurations, Virtualization, Cloud, LAN Admin/Troubleshooting, Programming, Web Development, System Analysis

Operating Systems:	Windows XP, Windows Vista, Windows 7, and Windows 10 Novell Client for Windows, UNIX, Windows 2003 Server, Windows 2008r2 Server, Windows 2012r2 Server, and Windows Server 2016, Windows server 2019, Windows server 2022
Applications:	MS Office 2010, and 2016, Access, PowerPoint, Console One, Ghosting software, SMS, SCCM, SCOM, Microsoft Exchange 2003, Microsoft Exchange 2007, Microsoft Exchange 2010, Microsoft Exchange 2013, Microsoft 365, Harbor/Tantia, Blackberry Desktop Manager, Websphere, RAD, Rational Clearcase, and Clearquest, Microsoft Viso 2016, DB2, Microsoft Visual Source Safe, Active Directory and GPO, Citrix Xen App, Citrix Desktop, Citrix VDI, and VMware Vsphere ESXI 5.0-6.5, Jira, GitHub, Cohesity, Connect Direct, Dynatrace
Networking/Protocols:	ARC Server, Forte, Net Ops, and Insight Manager, Novell, TCP, UDP, IP, HTTP, TELNET
Development/Database:	Vax System Version 7.1, Vax Vms, CRT, Oracle 11g, and 12c, VAX System, Vantive, BMC Remedy, Lotus Notes, SQL Server 2008, 2014, and 2016, and SharePoint 2013, and 2016
Languages:	Visual Basic.net, and Csharp

Professional Experience

Sr Systems Engineer, Raytheon Technologies (Government Contract), Arlington, VA 12/18-4/26

- Partner with cross functional teams to drive technical analysis, design, development, testing, implementation, and post implementation phases to help move the infrastructure into the proper direction into the cloud during our migration and for the future outlook.
- Managed projects and information in Jira by creating Kanban boards and Agile-centered Epics for software development and metrics.
- Managed Dynatrace and created dashboards to manage the health of applications and to manage our azure blob storage. I also used Dynatrace to monitor the servers and send alerts on critical problems and also to detect vulnerabilities.
- Worked with Claude AI to do workflow automation to track metrics and make updates in the database.
- Worked with SysML to Facilitate communication among various stakeholders across the System Development Life Cycle (SDLC), including both sides of the System V-Model.
- Manage tickets and data in Jira and the creation/management of the Kanban boards for each project
- Ensure that our Gov Cloud is FedRAMP and FISMA complied at all times.
- Briefed ROI (Return on Investment), explained findings of cloud resources tested to justify the chosen cloud resource based on the needs and growth of the infrastructure.
- Created proposal documentation and statements of work for new and upcoming contracts and projects
- Implemented Cognizant TriZetto AI Gateway and AI assistant into company infrastructure to help manage healthcare claims and systems.
- Managed Windows 2022 servers
- Managed Microsoft 365 migration and infrastructure
- Automated batch jobs using Powershell
- Worked with security engineers to create and implement tools for detection of possible threats on the federal government.
- Managed VMware Vsphere 6.7 environment.
- Responsible for hiring and managing 20 engineers, conducting evaluations, and managing all projects.
- Configured, built, and maintained VMware Workspace One software for the flexibility of employees being able to work from any mobile device and still have connectivity and be able to work with their regular applications.
- Managed and setup a CI/CD Pipeline for my software engineers to ensure that any software that needed changes was done properly and deployed to production correctly
- Managed the budget for the engineering department
- Automated and created a telework report from building a script that accessed different data points so that the data coming from VPN, VDI, Remedy, and SolarWinds could be used in a Power BI dashboard that I also helped create to show how much data is being used in all areas of the agency
- Managed Cohesity application to run all backups and manage storage needs
- Performed lift-and-shift of on-premises and virtual servers into Microsoft Azure cloud
- Managed Kubernetes containers for storage of the application repository to be used for testing applications and production deployment
- Worked with Microsoft IIS to create App Pools and Sites and also to configure the bindings for servers.
- Implemented Agile processes for projects to ensure they were done efficiently and with high quality
- Developed all processes and procedures for the IT department including the change review board, technical review board, and the security change board
- Created a pilot group and tested AWS Workspaces and Microsoft Azure VDI by building a sandbox and giving access to users so that I could test connectivity and make changes and perform different configurations on the AWS and Azure cloud infrastructure

Jermel Mosley

- Managed and configured Idea Scale innovation management software into the company for the benefit of crowd sourcing so that we can gather ideas from our employees and use them to develop new technologies and much more
- Managed System Center Configuration Manager (SCCM) and used it for all patches on servers and workstations and used it for scanning servers and checking for vulnerabilities
- Implemented and configured AirWatch Cloud Connector and Tunnel Server so that we could use an always on VPN for our laptops and mobile devices

Sr. Systems Engineer, State of Virginia (VITA), Richmond, VA 7/15- 12/18

- Configured, built, and maintained Windows 2012 domain controllers
- Implemented and configured Microsoft Azure Express Route in the infrastructure for a more secure connection for the applications
- Developed and configured Microsoft Azure IaaS for Microsoft peering of Office 365, Dynamics 365, and Azure Public Services
- Managed Palo Alto networks interface to provide network security for the infrastructure
- Manage 7 engineers and did all of the hiring and evaluations for the employees and managed all of their projects.
- Performed regular NetApp duties to ensure that the backup data was properly stored
- Installed/maintained enterprise Windows 2012 server upgrade; and installed/applied OS patches
- Performed changes to the DB2 database using Change Management Script Editor
- Automated batch jobs using Powershell
- Monitored and resolved network performance problems and outages using SolarWinds NPM
- Worked apart of the VITA contract and worked with different agencies within Virginia helping to build IT infrastructure.
- Worked with the DMV to help with monitoring software for the Tolling system.
- Updated the Life Cycle Management Framework the department
- Managed SCCM and used it for all patches on servers and workstations and also used it for scanning servers and checking for vulnerabilities
- Generated reports using IBM Cognos to analyze data in databases
- Worked with Cohesity to perform backups and restores of virtual machines.
- Managed .Net Framework class library for file reading/writing and database interaction
- Created and managed virtual machines using VMware vSphere 5.5, 6.0, and 6.5
- Performed regular load balancing, capacity, and performance testing to ensure optimal performance of Windows 2008 r2 and Windows 2012 servers
- Built, tested, and maintained RAD, Rational Clearcase and Clearquest, and DB2 applications
- Supported a large enterprise environment with 20 locations using Microsoft Active Directory
- Maintained SharePoint internal and external sites and SQL servers
- Audited servers to ensure security settings meet regulated network compliance standards
- Facilitated all Windows 2008 r2 and Windows 2012 server maintenance and upgrades
- Conducted imaging and software installations on all servers; performed network maintenance

Sr. Systems Engineer, HCA Healthcare, Richmond, VA 2/15- 7/15

- Led/performed reviews for the IT team; handled all documentation and project management
- Managed Infoblox interface to provide network security for the infrastructure
- Managed EMC storage, created storage pools and LUNs, ensured back-up data was properly stored

- Managed and use Tripwire software to ensure security on all enterprise servers and mitigated security risks to ensure the configurations remained in known and trusted states
- Installed and managed monthly enterprise Windows 2003/2008 r2 server patches
- Troubleshoot using Systems Center Configuration Manager 2012 deployment monitoring tool
- Configured and built VMware ESXi 5.1 servers/Virtual Machines, and managed the vCenter
- Audited servers to ensure security settings meet government-regulated network compliance standards
- Facilitated all Windows 2003 and Windows 2008 r2 server maintenance and upgrades
- Performed software upgrades, and patches using System Center Configuration Manager 2012
- Supported Citrix Xen App for remote users who use applications from the central location
- Installed and managed Citrix desktop and VDI connection to the machines. Also used Virtual Machine Manager to connect to the remote machines and work on any issues with them
- Conducted imaging and software installations on all Servers and performed network maintenance, including tape backup rotation and data restoration, through the Networker backup software, and maintained Continuous Access software to ensure that our disaster recovery procedures were in place

Sr. Systems Engineer, Innovative Technology Systems, Arlington, VA **9/13- 2/15**

- Configured/built VMware ESXi servers and Virtual machines, and managed the vCenter
- Performed changes to the DB2 database using Change Management Script Editor
- Managed and used CheckPoint software to ensure security on all enterprise servers to mitigate security risks and ensure the configurations remained in known and trusted states
- Installed and managed monthly enterprise Windows 2008 r2 server patches
- Performed regular NetApp duties to ensure that the backup data was being properly stored
- Troubleshoot using Systems Center Configuration Manager 2012 deployment monitoring tool
- Audited servers to ensure security settings meet government regulated network compliance standards
- Facilitated all Windows 2003 and Windows 2008 r2 server maintenance and upgrades
- Performed server health monitoring using System Center Operations Manager 2012 (SCOM)
- Performed software upgrades and patches using SCCM
- Renewed SSL certificates and handled any SSL certificate issues
- Supported Citrix Xen App for remote users who used applications from the central location
- Installed and managed Citrix desktop and VDI connection to the machines; used Virtual Machine Manager to connect to the remote machines to resolve issues
- Conducted imaging/software installations on servers and performed network maintenance, including tape backup rotation and data restoration through the Networker backup software
- Maintained Continuous Access software to ensure disaster recovery procedures were in place

Sr. Systems Engineer, SAIC, Washington, DC **7/12- 9/13**

- Configured and built VMware ESXi servers and Virtual machines; and managed the vCenter
- Managed and used Tripwire software to ensure security on all enterprise servers and mitigated security risks to ensure the configurations remained in known and trusted states
- Performed changes to the DB2 database using Change Management Script Editor
- Configured and built Citrix Xen App 6.5 server
- Performed monthly patching on windows servers using SCCM
- Managed all Microsoft Active Directory tasks or issues for the enterprise
- Managed IIS web server
- Installed and managed monthly enterprise Windows 2008 r2 server patches
- Maintained SharePoint and SQL servers
- Performed regular NetApp duties to ensure backup data was properly stored
- Audited servers to ensure security settings met Govt-regulated network compliance standards
- Supported and fixed Citrix VDI problems using Hyper V
- Facilitated all Windows 2003 and Windows 2008 r2 server maintenance and upgrades
- Performed server health/application monitoring, conducted root cause analysis with SolarWinds APM

Jermel Mosley

- Performed Brocade Switch configurations to ensure the proper ports were being used
- Renewed SSL certificates and handled any SSL certificate issues
- Supported Citrix Xen App for remote users who used applications from the central location
- Installed and managed Citrix Desktop and VDI connections to the machines and used Virtual Machine Manager to connect to the remote machines to work on any issues
- Conducted imaging and software installations on all servers and perform network maintenance, including tape backup rotation, and any type of data restoration needed to happen through the Networker backup software, and maintaining Continuous Access software to ensure that disaster recovery procedures were in place

Sr. Systems Engineer Lead, Lockheed Martin Inc, Washington, DC

1/09- 7/12

- Configured/built Windows Exchange 2010 server as part of an upgrade from Windows 2008 r2 server
- Performed regular NetApp duties to ensure that the backup data is being properly stored
- Installed/maintained enterprise Windows 2008 server upgrade and installed Windows patches
- Performed changes to the DB2 database using Change Management Script Editor
- Monitored network and resolved network performance problems and outages using SolarWinds NPM
- Designed the Citrix VDI environment
- Managed IIS web server
- Troubleshoot using SCCM deployment monitoring tool
- Managed .Net Framework class library for file reading and writing and for database interaction
- Created and managed virtual machines using VMware vSphere 5
- Performed regular load balancing, capacity, and performance testing to ensure optimal performance of Windows 2008 r2 server
- Supported an enterprise environment comprised of over 20 locations using MS Active Directory
- Maintained SharePoint and SQL servers
- Audited servers to ensure security settings meet Govt-regulated network compliance standards
- Facilitated all Windows 2003 and Windows 2008 r2 server maintenance and upgrades
- Built IBM e-servers and installed Windows 2003
- Tested and supported Microsoft Windows 7
- Led a project to do remote support using Citrix Access Gateway
- Setup and synchronized email for Blackberry application and provided software support for Blackberry desktop manager software; managed user accounts with Blackberry Enterprise Server
- Manage VoIP phone support on Cisco IP Phones
- Supported Citrix Xen App for the remote users who use applications from the central location
- Conducted imaging and software installations on all servers and performed network maintenance
- Configured Oracle 11g w/tape backup rotation and data restoration through the Net backup software
- Setup calendar properties, including sharing and collaborative calendar access for scheduling and accepting meetings and conference calls

Sr. Systems Engineer, American Dietetic Association, Chicago, IL

9/08-12/08

- Installed and tested changes to the Windows 2003 servers including security patches, service packs, and new releases of applications, and resolves issues that may occur during installation
- Support all software problems with the user's desktops in a Linux, and UNIX environment
- Used Active Directory 2008 to create user accounts, grant permissions, and customize user profiles
- Maintained Windows 2003 server for optimal performance; troubleshoot/remedied network issues
- Maintained SharePoint and SQL servers
- Managed Microsoft Active Directory users, and domain controllers

- Handled tape backup rotation and data restoration through the Net backup software
- Conducted imaging and software installations on all desktops and laptops
- Setup and synchronized email for all Blackberry applications; provided software support for Blackberry desktop manager software and manage user accounts with Blackberry Enterprise Server
- Set up calendar properties, including sharing and collaborative calendar access for scheduling and accepting meetings and conference calls
- Support all VoIP phone support on Cisco IP Phones

Sr. Software Support Engineer, First Traders Analytical Solutions, Chicago, IL **5/07-6/08**

- Managed trade apps (Option Trader Pro, Option Lite, Trading Technologies, Bloomberg, Reuters)
- Tested new software releases and deployed to production
- Provided hardware and software support for all Microsoft Windows desktop issues and any issues with the network, database, or server related problems
- Built and configured the Windows Exchange 2007 server
- Provided remote support, including off-hours, with any software applications problems being supported in a Linux and Microsoft networked environment; Used SMS to install user software
- Created queries in SQL Server 2005 to retrieve data
- Setup and synchronized email to all the new Blackberrys and provided software support for Blackberry Desktop Manager version 4.3 software; managed user accounts with Blackberry Enterprise Server and set up calendar properties, including sharing/collaborative calendar access for scheduling and accepting meetings and conference calls
- Used VMware on the desktop to run multiple secure PC environments on one PC
- Maintained all documentation for all companies and users
- Provided VPN setup, configuration, and troubleshooting support
- Monitored the Windows 2000 / 2003 server problems and troubleshoot issues or problems
- Performed server upgrades, installed and uninstalled software on servers, executed server reboots remotely and locally, and used server load balancing to manage server traffic
- Managed and completed a company wide operating systems migration to Windows Vista
- Used Active Directory to create user logins and to over see all user accounts
- Worked closely with developers to create new ideas for new software builds
- Monitored all stock market exchanges to ensure system was working from open to close
- Conducted onsite training for companies using our software for the first time
- Support traders on the floor in all of the exchanges and any helpdesk users that were a part of those exchanges that need help troubleshooting or operating our software
- Worked with streaming software VLC media player, Windows Media player, and DIVX

Sr. Integration Analyst, Allstate Insurance Company, Northbrook, IL **6/05-5/07**

- Conducted hardware/software integration testing; implemented data recovery and backup procedures
- Supported application hardware and software health and resolved end user problems
- Diagnosed complex hardware and software problems
- Built/tested Websphere, RAD, Rational Clearcase/Clearquest, DB2, and FileNet thin/thick client apps
- Supported root-cause analysis on intermediate-to-moderately complex incidents to provide future application, hardware and/or software resiliency
- Updated security procedures based on security audit
- Designed data collection and reporting mechanisms for application health reporting
- Mentored and coached peers and colleagues; Provided informal training to others on the team
- Resolved trouble issues within Windows Exchange Server 2005
- Provided Wintel Support and used SMS to install software on user's machines
- Setup/synchronized email to new Blackberrys and provided Blackberry desktop manager software support; managed user accounts with Blackberry Enterprise Server; setup calendar properties, including collaborative calendar access for scheduling and accepting meetings and conference calls

Jermel Mosley

- Coordinated security access and controls; monitored user admin rights in Windows 2000/XP
- Installed and tested changes to the desktop including security patches, service packs, and new releases of applications and resolve issues that may occur during installation
- Assembled/configured PC hardware, including monitors, expansion boards, printers, and peripherals
- Conducted imaging and software installations on all desk side desktops, and laptops

Sr. Trade Support Analyst, Chicago Board of Trade, Chicago, IL

4/03-6/05

- Used CICS, and TSO to monitor user accounts and reset user passwords
- Supported, built, and configured Microsoft Exchange Server 2005
- Troubleshoot and configure Lotus Notes issues on or off the network
- Utilized Remedy software to create, open, modify, and close tickets
- Used Novell Console One software to create and reset passwords, and for remote management
- Supported trading applications (Bloomberg, Reuters, QVS, MCS, THS, LIFEE, PRICES)
- Used SMS to install software on user systems
- Troubleshoot user hardware and software issues on proprietary and third-party applications (MS Office 2000 and XP, Novell Group Wise, Oracle Client 8.x, Toad, and SQL Server) via phone or remotely

Lead Systems Administrator, Philip Morris USA, Richmond, VA

12/00-4/03

- Monitored programs/servers, used back-up tapes to provide 24/7 networks and application operation
- Served as highest point of escalation for trouble calls for network and software issues
- Tested, configured, and upgraded desktops, authored scripts for all users on the network
- Assisted quality analyst with test data using Rational ClearCase, ClearQuest, and TestDirector
- Used SS7 to setup and manage telephone calls
- Executed periodic virus scans on all computers and servers
- Used Symantec Norton Ghost 8.0 to load/image new servers and PCs and Novell Client for Windows
- Employed VAX Systems 7.1 to change AS400 back-up tapes; researched report/printer errors
- Monitored server disk space over-utilization; communicated with end-users exceeding limitations
- Monitored the Oracle database, daily, ensuring consistent and maximum uptime
- Installed new programs on mainframe and built / installed extra Servers, as necessary
- Assisted the senior UNIX administrator with Linux, Perl, and Shell scripting
- Administered user permission for files, documentation, and shared programs in UNIX
- Used Vantive trouble management system and iHeat ticketing system to resolve client hardware, software, and networking cases over the phone and repaired problems on-site when necessary
- Created applications and server documentation and presented to department heads

Education: Computer Engineering, Virginia Commonwealth University Richmond, VA

1996-2000
