

KAMLESH GATHE

[Lead NetSuite Functional Consultant]

US CITIZEN

Phone: +1 4699669031

Email: kamleshgathe287@gmail.com |

PROFESSIONAL SUMMARY:

- 15+ years of IT experience specializing in NetSuite ERP implementations, functional consulting, business process transformation, and enterprise application solutions.
 - Extensive experience leading end-to-end NetSuite ERP implementations across Finance, Order Management, Procurement, Inventory, CRM, and Project Management.
 - Strong expertise in NetSuite functional configuration including workflows, saved searches, custom reports, dashboards, roles, permissions, forms, and approval processes.
 - Proven experience conducting business process analysis, requirements gathering, process mapping, and Fit-Gap Analysis for enterprise clients.
 - Experienced in translating business requirements into scalable NetSuite functional solutions aligned with organizational objectives.
 - Strong knowledge of Order-to-Cash (O2C), Procure-to-Pay (P2P), Record-to-Report (R2R), Accounts Receivable, Accounts Payable, and General Ledger processes.
 - Hands-on experience supporting month-end and year-end financial close optimization through NetSuite ERP solutions.
 - Expertise configuring NetSuite workflows to automate approvals, notifications, business rules, and operational processes.
 - Extensive experience developing saved searches, KPIs, dashboards, financial reports, and executive reporting solutions.
 - Strong understanding of NetSuite security configuration including roles, permissions, approval hierarchies, and segregation of duties.
 - Experience implementing NetSuite SuiteProjects for project accounting, project billing, resource management, and time tracking.
 - Expertise supporting Advanced Revenue Management (ARM), billing schedules, subscription billing, and revenue recognition processes.
 - Experience configuring intercompany transactions, multi-subsidiary accounting, and financial consolidations.
 - Skilled in integrating NetSuite with CRM, ERP, HR, payroll, financial, and third-party applications using SuiteTalk, REST APIs, Dell Boomi, and SuiteCloud technologies.
 - Strong consulting experience facilitating client workshops, discovery sessions, stakeholder interviews, and solution demonstrations.
 - Experience preparing Business Requirement Documents (BRDs), Functional Specifications (FSDs), Solution Design Documents (SDDs), and process documentation.
 - Proven ability to manage multiple client engagements while delivering high-quality ERP consulting services.
 - Strong background in organizational change management, user adoption, and business process reengineering initiatives.
 - Expertise supporting User Acceptance Testing (UAT), Conference Room Pilots (CRPs), production deployments, and post-go-live optimization.
 - Experience collaborating with executive leadership to define ERP strategies, technology roadmaps, and digital transformation initiatives.
 - Strong understanding of SaaS business models including subscription management, project billing, recurring billing, and contract lifecycle management.
-

- Experience implementing continuous process improvement initiatives using ERP best practices and Lean methodologies.
- Excellent communication, stakeholder management, and cross-functional leadership skills.
- Proven ability to deliver scalable, client-focused NetSuite ERP solutions that improve operational efficiency and business performance.
- Committed to driving enterprise digital transformation through innovative NetSuite functional consulting and business process optimization.

PROFESSIONAL EXPERIENCE:

Freddie Mac, McLean, VA

July 2020 – Till date

Lead NetSuite Functional Consultant

Responsibilities:

- Led end-to-end NetSuite ERP functional implementation projects from discovery through production deployment.
 - Conducted client workshops, stakeholder interviews, requirements gathering sessions, and business process assessments.
 - Performed Fit-Gap Analysis to identify business requirements and recommend standard NetSuite functionality or configuration enhancements.
 - Configured NetSuite workflows, saved searches, dashboards, custom reports, roles, permissions, forms, and approval processes.
 - Designed and optimized Order-to-Cash (O2C), Procure-to-Pay (P2P), and Record-to-Report (R2R) business processes.
 - Supported month-end and year-end financial close acceleration through workflow automation, reconciliation improvements, and reporting enhancements.
 - Configured NetSuite Advanced Revenue Management (ARM) for revenue recognition, billing schedules, and contract accounting.
 - Implemented NetSuite SuiteProjects to support project accounting, resource management, project billing, and timesheet tracking.
 - Configured intercompany accounting processes supporting multi-subsidiary financial operations and consolidations.
 - Designed recurring billing, milestone billing, subscription billing, and contract management solutions for SaaS business models.
 - Configured NetSuite security including roles, permissions, approval hierarchies, and segregation of duties to ensure compliance.
 - Developed Business Requirement Documents (BRDs), Functional Design Documents (FDDs), Functional Specifications (FSDs), and Solution Design Documents (SDDs).
 - Collaborated with technical teams to deliver SuiteScript customizations, integrations, and configuration enhancements aligned with business requirements.
 - Integrated NetSuite with CRM, ERP, payroll, HR, financial systems, and third-party applications using SuiteTalk, REST APIs, and Dell Boomi.
 - Conducted Conference Room Pilots (CRPs), solution demonstrations, User Acceptance Testing (UAT), and production readiness activities.
 - Managed multiple client engagements while ensuring successful delivery within project timelines and quality standards.
 - Facilitated organizational change management initiatives, user training sessions, and knowledge transfer activities to support business adoption.
 - Analyzed existing business processes and identified opportunities for automation, operational improvements, and continuous optimization.
 - Partnered with executive stakeholders to develop ERP roadmaps, strategic initiatives, and digital transformation programs.
-

- Researched NetSuite best practices, emerging technologies, and industry trends to recommend innovative ERP solutions.
- Supported post-go-live stabilization, issue resolution, production support, system enhancements, and continuous improvement initiatives.
- Collaborated with advisory, project management, and cross-functional consulting teams to deliver enterprise-wide NetSuite solutions.
- Provided functional leadership throughout the ERP implementation lifecycle while ensuring alignment with business objectives and governance standards.
- Delivered scalable NetSuite ERP solutions that enhanced financial operations, operational efficiency, reporting capabilities, compliance, and overall business performance.

Comcast, Pennsylvania

Nov 2018 to June 2020

Sr. Netsuite Developer

Responsibilities:

- Managed version control for all SuiteScript and integration code using GitHub, ensuring that development teams could collaborate efficiently and track code changes.
 - Deployed automated testing frameworks for SuiteScript using SuiteCloud IDE and GitHub, improving the quality and reliability of custom scripts.
 - Utilized Dell Boomi to automate supply chain processes, ensuring that data related to shipments, deliveries, and inventory was accurately exchanged between systems.
 - Created automated processes using SuiteScript to perform system health checks, ensuring that NetSuite remained operational and free of errors.
 - Developed and maintained custom Suitelets for managing employee records, automating HR processes within NetSuite.
 - Implemented API-based integrations between NetSuite and external payment processors using SuiteTalk, improving payment processing and reconciliation efficiency.
 - Enhanced data accuracy by building validation and data cleansing processes within SuiteScript, ensuring that only correct and valid data was processed.
 - Coordinated with business analysts to design and implement SuiteScript-based solutions that met specific business requirements, ensuring high customer satisfaction.
 - Optimized system performance by tuning SuiteScript execution, improving the efficiency of custom business processes and integrations.
 - Created custom automated processes for managing procurement workflows, streamlining purchase order creation, approval, and receipt.
 - Integrated third-party product catalog systems with NetSuite using SuiteTalk Web Services, automating product updates and ensuring consistency across platforms.
 - Built custom integrations between NetSuite and marketing automation systems, ensuring that leads, contacts, and marketing data were synchronized in real-time.
 - Implemented scheduled SuiteScript jobs to automate the archival of historical data, ensuring data was managed efficiently while meeting retention requirements.
 - Used Dell Boomi to automate invoice generation and send payment reminders to customers, reducing administrative workload and improving cash flow.
 - Utilized SuiteTalk to synchronize external order management systems with NetSuite, automating the creation of sales orders and invoices in NetSuite.
 - Developed SuiteScript solutions for automating employee expense approval workflows, streamlining the process and ensuring compliance with company policies.
 - Worked with the development team to integrate NetSuite with a third-party payroll system, automating payroll data synchronization.
-

- Implemented logging mechanisms within SuiteScript to capture detailed error reports, enabling faster troubleshooting and minimizing downtime.
- Built custom Suitelets to automate the handling of complex transactions such as returns and exchanges, improving customer satisfaction.
- Integrated external project management tools with NetSuite using SuiteTalk, automating the flow of project data and improving project tracking.
- Enhanced internal reporting by developing custom Suitelets that provided advanced filtering options and real-time access to key business metrics.
- Deployed automated workflows for handling recurring invoices, reducing manual intervention and ensuring timely billing.
- Created detailed documentation for custom SuiteScript projects, providing a valuable resource for troubleshooting and future development efforts.
- Utilized SuiteTalk Web Services to integrate third-party suppliers with NetSuite, automating purchase order creation and inventory tracking.
- Worked with the team to implement version control best practices for SuiteScript development, improving code maintainability and collaboration.
- Created custom SuiteScript 2.x modules that enabled the automated generation of financial reports, streamlining accounting processes.

VERIZON, Dallas, TX

Feb 2015– Oct 2018

Netsuite Developer

Responsibilities:

- Implemented data migration scripts using SuiteTalk to transition legacy data into NetSuite, ensuring that historical records were accurately imported.
 - Managed complex integration projects between NetSuite and external business applications, ensuring that data flows seamlessly and without errors.
 - Utilized Dell Boomi to integrate NetSuite with a third-party CRM system, automating lead and opportunity management.
 - Built custom SuiteScript processes for managing inventory returns and stock adjustments, improving warehouse operations and reducing stock discrepancies.
 - Developed an automated invoicing system using SuiteScript and SuiteTalk, reducing manual invoicing errors and improving operational efficiency.
 - Leveraged SuiteTalk to automate the synchronization of shipping and tracking information between NetSuite and third-party logistics providers.
 - Managed the testing and deployment of SuiteScript and integration changes using GitHub and ADO, ensuring smooth and error-free production releases.
 - Integrated external financial systems with NetSuite using SuiteTalk Web Services, improving financial data accuracy and reducing manual reconciliation tasks.
 - Developed and deployed SuiteScript 2.x solutions to automate complex business workflows within NetSuite, significantly improving operational efficiency and reducing manual errors.
 - Upgraded legacy SuiteScript 1.0 scripts to SuiteScript 2.x, leveraging enhanced functionality, performance improvements, and modern APIs to ensure scalability and maintainability.
 - Integrated third-party systems with NetSuite using SuiteTalk (SOAP Web Services), facilitating real-time data exchange between NetSuite and external platforms like CRMs and ERPs.
 - Created and consumed REST Web Services to enable seamless communication between NetSuite and other applications, enabling real-time data synchronization and automation of business processes.
 - Designed and implemented custom Suitelets to provide dynamic, user-friendly interfaces that allowed users to interact with NetSuite data, improving usability and business process efficiency.
-

- Developed scheduled SuiteScript jobs to automate routine tasks such as data imports, system health checks, and reports, freeing up resources and ensuring timely completion of critical tasks.
- Managed version control and deployment processes using GitHub and Azure DevOps (ADO), establishing a CI/CD pipeline that improved the speed and reliability of custom script deployments.
- Implemented rigorous change management practices using GitHub and ADO, ensuring that SuiteScript and integration code were thoroughly tested, reviewed, and tracked before being deployed to production.
- Integrated Dell Boomi with NetSuite to streamline data synchronization between NetSuite and other systems, automating business processes such as order management and inventory tracking.
- Developed and maintained custom SuiteScript integrations for syncing data between NetSuite and external applications, improving the accuracy and timeliness of data transfer.
- Built and optimized complex Suitelets that provided real-time data views and analytics, allowing business users to interact with and analyze data in ways that were not possible with standard NetSuite interfaces.
- Automated data synchronization between NetSuite and external eCommerce platforms using SuiteTalk Web Services, reducing errors and manual effort associated with order management.
- Worked with cross-functional teams to gather requirements and develop custom SuiteScript solutions, ensuring that all integrations aligned with business objectives and user needs.
- Created and deployed SuiteScript solutions that leveraged the power of NetSuite's SuiteCloud Development Framework (SDF) for modular and scalable applications, improving maintainability and reducing deployment complexities.
- Utilized Dell Boomi for end-to-end integration solutions, creating processes that automated data flows between NetSuite and multiple external systems, ensuring business operations were seamless and data was consistently up-to-date.

Tesla, California

Mar 2012 – Jan 2015

NetSuite Application Developer

Responsibilities:

- Developed custom Suitelets that allowed users to perform bulk updates and mass actions on records, saving time and reducing the complexity of data management tasks.
 - Implemented complex validation logic using SuiteScript 1.0 to ensure data integrity across multiple record types, preventing inconsistent or invalid data from being saved in NetSuite.
 - Created custom integrations between NetSuite and eCommerce platforms using SuiteTalk Web Services, ensuring that order and customer data were synchronized in real time.
 - Developed custom Suitelets that enabled users to perform advanced searches, filter data based on multiple criteria, and generate reports tailored to specific business needs.
 - Worked with the NetSuite support team to troubleshoot and resolve issues related to SuiteTalk integrations, ensuring that external systems remained properly synchronized with NetSuite.
 - Designed and implemented custom RESTful services in SuiteTalk to allow for more efficient and scalable integrations with external applications and services.
 - Used SuiteScript 1.0 to build integration points that allowed NetSuite to send automated emails based on user interactions and business triggers, streamlining communication processes.
 - Developed custom Suitelets to allow users to manage inventory levels and order fulfillment, reducing the manual steps required to process transactions.
 - Implemented SuiteTalk Web Services to automate the exchange of data between NetSuite and external inventory management systems, improving accuracy and reducing manual data entry.
 - Created custom user interfaces within NetSuite using Suitelets, allowing for personalized data views and improving the user experience for internal and external stakeholders.
 - Used SuiteTalk Web Services to integrate NetSuite with external financial systems, automating the flow of financial data and improving the accuracy of financial reporting.
-

- Built SuiteScript 1.0 workflows that automated repetitive tasks like lead assignments and follow-up reminders, improving productivity and reducing the need for manual interventions.
- Integrated SuiteTalk Web Services with customer support systems to automate ticket creation and updates, ensuring that customer issues were handled efficiently and accurately.
- Developed custom Suitelets to facilitate approval workflows, automating the routing of documents for manager approval and reducing the time required to complete administrative tasks.
- Used SuiteScript 1.0 to automate the generation of customized PDF reports based on business criteria, making it easier for users to extract and share key information.
- Developed SuiteTalk integrations with external marketing platforms, enabling automated lead synchronization between NetSuite and marketing systems to improve lead management.
- Created custom Suitelets that allowed users to view and manage multi-step workflows, improving efficiency and reducing the need for manual data input in complex workflows.
- Wrote custom SuiteScript 1.0 scripts to handle error logging and exception handling, ensuring that any issues encountered during script execution were properly tracked and addressed.
- Integrated external accounting systems with NetSuite via SuiteTalk, automating the transfer of financial data to ensure accurate general ledger entries.
- Utilized SuiteTalk to synchronize data from external supply chain management systems with NetSuite, ensuring that inventory data was up-to-date and accurate.
- Designed SuiteScript 1.0 solutions to automate the creation and approval of employee expenses, improving compliance with company policies and reducing administrative overhead.

Cigna, Greater Denver Area

Sep 2007 – Feb 2012

NetSuite Integration Developer

Responsibilities:

- Developed and customized business logic in NetSuite using SuiteScript 1.0, creating server-side and client-side scripts to automate processes and integrate with third-party applications.
 - Developed custom workflow automation scripts using SuiteScript 1.0 to manage inventory, purchasing, and order processing, improving operational efficiency.
 - Integrated SuiteTalk with external shipping and logistics systems, automating the shipment tracking process and updating NetSuite records accordingly.
 - Used SuiteTalk to synchronize data between NetSuite and legacy systems, ensuring that historical data was preserved and made accessible within the NetSuite environment.
 - Enhanced user interfaces within NetSuite by developing custom Suitelets with dynamic search filters, allowing users to efficiently navigate and retrieve relevant data.
 - Created automated batch processing scripts using SuiteScript 1.0, allowing for the mass creation, update, and deletion of records within NetSuite based on specific business rules.
 - Collaborated with business analysts and functional teams to gather requirements and translate them into SuiteScript 1.0 solutions that addressed specific business needs.
 - Implemented SuiteTalk Web Services to facilitate integration with external CRM systems, ensuring seamless synchronization of customer data and improving customer relationship management.
 - Used SuiteTalk to integrate NetSuite with external tax calculation systems, automating tax calculations and reducing manual tax entry errors.
 - Wrote SuiteScript 1.0 scripts to create custom workflows that automated lead-to-cash processes, improving sales cycle efficiency and customer satisfaction.
 - Developed custom Suitelets that provided internal users with customized workflows for handling complex transactions, improving user experience and reducing manual errors.
 - Created custom SuiteScripts that interfaced with NetSuite's native modules like Accounts Receivable and Accounts Payable to automate invoicing and billing processes.
-

- Utilized SuiteTalk to integrate with external human resources systems, automating employee record synchronization between NetSuite and other HR platforms.
- Designed and implemented custom Suitelets to build dynamic user interfaces within NetSuite, allowing users to interact with custom records and workflows.
- Integrated external systems with NetSuite using SuiteTalk (SOAP Web Services), ensuring seamless data exchange between NetSuite and other enterprise applications.
- Utilized SuiteCloud Developer Framework (SDF) to manage, deploy, and maintain custom scripts, workflows, and records within NetSuite, ensuring efficient development practices.
- Developed custom SuiteScript 1.0 workflows for automating business processes, improving operational efficiency, and reducing manual intervention.
- Used SuiteTalk to create, update, and delete records in NetSuite from external systems, facilitating real-time data synchronization and minimizing data entry errors.
- Created Suitelets to provide users with custom pages and interfaces that streamlined tasks like data entry, reporting, and workflow management within the NetSuite environment.
- Implemented SuiteScript 1.0 to create custom record types, including fields, sublists, and custom validations, ensuring that NetSuite met the unique business requirements of the organization.
- Worked with RESTful APIs and SuiteTalk SOAP Web Services to integrate NetSuite with various third-party applications like CRMs, ERPs, and eCommerce platforms.
- Developed and deployed custom Suitelets to facilitate the creation and management of custom records and transactions, improving user experience and reducing workflow complexity.
- Implemented SuiteTalk Web Services to enable real-time data transfer between NetSuite and external systems, ensuring consistency and accuracy of business-critical data.
- Used SuiteScript 1.0 to automate the creation of purchase orders and invoices, reducing manual errors and improving the speed of financial processes.
- Wrote and tested SuiteScript 1.0 scripts to enforce business rules and validation logic for custom records, ensuring compliance with company policies and data integrity.
- Created custom Suitelets to provide data-driven reports and dashboards, helping stakeholders track key metrics and make informed decisions within the NetSuite platform.
- Integrated NetSuite with payment gateways using SuiteTalk, enabling seamless financial transactions between NetSuite and external payment processing systems.
- Developed custom Suitelets with complex user interfaces that allowed users to interact with multiple related records and display real-time data for decision-making.
- Leveraged SuiteTalk to fetch large volumes of data from external systems, integrating it into NetSuite for analysis and reporting.
- Used SuiteScript 1.0 to implement automated notifications and alerts based on specific business triggers, ensuring that users were promptly informed of critical events.
- Designed and developed custom dashboards and reports in NetSuite using SuiteScript 1.0 and Suitelets, providing real-time access to business performance data.

Bachelor in Production, University Of Pune, 1992
