

Robert Wynter

Suitland, MD 20746 | +1 240 478 4363 | robertwynter7_adx@indeedemail.com

Professional Summary

Dynamic and results-driven Cloud and Systems Engineer with over 12 years of experience architecting, deploying, and maintaining enterprise-level systems across Linux and Windows platforms. Expertise in cloud infrastructure (AWS, Azure, GCP), distributed systems (Hadoop, Spark, Kafka), containerization (Docker, Kubernetes), and scripting (Python, Shell). Proven ability to lead cross-functional teams, manage system migrations, optimize performance, and deliver secure, scalable solutions in high-stakes government environments

Willing to relocate: Anywhere

Work Experience

IT/Ops Team Lead

Dark Wolf Solutions | College Park, MD

February 2026 to Present

- Deploy and maintain critical services supporting both on-prem and cloud-native architecture
- Work with the Cybersecurity team by implementing industry's best practices for system hardening and configuration management
- Incorporate Cybersecurity best practices and methodologies into repeatable, scalable environments within a Navy ecosystem
- Use automation best practices, such as IaC and GitOps, for repeatability and fast provisioning of environments
- Deploy and maintain Kubernetes platforms in multiple environments and classification levels
- Work closely with development teams to provide onboarding support
- Provide Tier 3 level support to DoD customers and developers as required
- Mentor staff, provide guidance and direction
- Ensure platform and networks are compliant with DoD policies
- Support backup and disaster recovery planning

Cloud Computing Engineer Principal

SAIC | Reston, VA

January 2024 to January 2026

- Architected and maintained distributed computing systems (Hadoop, Spark, HBase/Accumulo, Kafka) in high-security environments.
- Served as Linux SME, ensuring robust infrastructure for large-scale deployments.
- Led AWS-based deployments using Terraform, enabling full infrastructure automation.
- Designed and implemented custom ML monitoring tools using Prometheus and Grafana.
- Oversaw containerized deployments using Docker and Kubernetes, streamlining CI/CD processes.
- Wrote and maintained infrastructure automation scripts (Python, Bash).
- Collaborated with clients to migrate and modernize legacy systems into cloud-native architectures.

Cloud Engineer

Koverse | Reston, VA

August 2022 to December 2023

- Examine and identify database structural necessities by evaluating client operations, applications, and programming directly with customers in a technical role to help ensure smooth adoption of the Koverse platform.
- Directly interact with customers migrate data from legacy systems to new solutions in a technical role.
- Spec, build, test and deploy customized machine learning and/or other mission-focused applications based on customer requirements.
- Participate in deployment and implementation planning with customers.
- Directly assist with installation and setup of the Koverse platform.
- Produce customer documentation to support custom applications.
- Contribute technical content and tutorials to product documentation.
- Install distributed systems like Hadoop, HBase/Accumulo, Spark and Kafka for the Koverse platform.
- Managed writing scripts using Linux shell, Python, or similar scripting language.
- Managed Cloud technologies such as Azure, AWS, or GCP.
- Subject matter expert for working with Linux to install and maintain a distributed computing infrastructure.

Lead Linux System Administrator

DISYS | Chantilly, VA

January 2021 to August 2022

- Manages problem resolution from client to system administrators with a 90% success rate.
- Implemented established security requirements to provide solutions to technical problems related to the safeguards to protect information against accidental or unauthorized modification, destruction, or disclosure to meet emergency data processing needs.
- Performs system monitoring using approved tools and processes to validate system health through installation of patches, kick-starting a new system, modifying security files, control files and data access and corrects errors.
- Manage, implement, and monitor information security reports established by management of user system access to meet security requirements.
- Managed system performance for high availability government programs - to maintain Oracle and Maria Databases for updates and configure solutions.
- Documented Standard Operating Procedures (SOP) for new and current employees to produce resolutions/analyses for structured process improvement and meeting customer requirements.
- Design of backup and restore procedures to ensure system and data availability.
- System integration, hardware and software installation, configuration, and disposition of servers to support the architecture.
- Supports the validation of end-to-end system functionality through unit and integration testing.

Linux Administrator

U.S. Dept of Homeland Security | Washington, DC

June 2018 to December 2020

- Responsible for promoting IT innovation through research and development and by providing assessments of new and evolving technologies, techniques, and industry best practices in IT infrastructure.
- Collect the new technologies and tools and introduced them to the company; in which it helped the company build up an agile development environment.
- Remediate potential OS security vulnerabilities abiding to security policies and standards.
- Install and maintain containers via Apache Tomcat and MySQL servers.
- Experience in migrating and configuring disaster recovery environments.
- Configure infrastructure standard security benchmarks.
- Provided coordination support between networks, enterprise applications, and the developmental architecture.
- Building datacenters including DEV, test, production, and DR facilities.
- Knowledge of installing RHEL server from scratch using kickstart and PXE boot.
- Analyze systems, servers, applications, networks, and input/output devices performance.
- Ongoing industry research and training on current and forthcoming technologies.
- Tune kernel parameters depending on system capability and performance.
- Diagnosing and resolving system related tasks in accordance with security priorities setup.
- Wrote custom monitoring and integrated monitoring methods into deployment processes to develop self-healing solutions.
- Install, configure, tuning, security, backup, recovery, and upgrades of Windows/Linux platforms.

Linux Administrator

U.S Department of Agriculture | Washington, DC

June 2014 to May 2016

- Monitor the system performance by performing regular tests, troubleshooting, and integrating new features.
- Provide support in a demanding 24/7 production environment in Linux.
- Troubleshooting outages, active directory manages, DNS and DHCP management.
- Analyze cost effective solutions for business compliance.
- Integrate process across Service Domains, Change, Problem, and Configuration Management.
- Experience with incident response (malware, DDOS attacks, data breaches).
- Setup configuration file for kick start environment for Linux production and test systems.
- Worked on installation of VMware ESX and creating virtual machines from scratch.
- Creating profiles on new blades with templates within SLA.
- Provide remote support for field engineers.
- Perform run level checks in store on a weekly basis to ensure high availability of database and applications.
- Managing database, storage, network and System management teams to define security and backup procedures.
- Restoring and backup from NetBackup tool.
- Responsible for creating and managing user accounts, security, rights, disk space, and process monitoring Solaris, CentOS and RHEL.
- Utilized Remedy for data center service requests (Network requests for IP's, ILO's, and DNS changes).
- Experience administering, installing, configuring and maintaining Linux.
- Experience installing, upgrading and configuring Red Hat Linux 5.x, 6.x, 7.x using Kickstart Servers and Interactive Installation.
- Configures DNS, NFS, FTP, remote access, and security management.
- Creates Linux Virtual Machines using VMware Virtual center.
- Installs, upgrades and manages packages via RPM and YUM package management.
- Installs, configures and supports Apache on Linux production servers.

NOC Analyst

CVS | Reston, VA

March 2012 to May 2014

- Installation, Configuration and Upgrade of RHEL 5.x,6.x OS.
- Daily administration of RHEL 5.x and 6.x.
- Administered Linux servers for several functions including managing Users, Groups and Permission for each Group and Users.
- Create and maintain user groups accounts on Linux Servers.
- Experience in iptables commands includes those used to add, append, delete, or replace rules within a particular chain.
- Installed software packages and configured File systems as per specifications of client.
- Involved in configuration and support of the production environment hosted in a 24x7 setup.
- Troubleshooting application issues on Apache web servers and database servers running on Redhat Linux.
- Monitored the servers and Linux scripts regularly and performed troubleshooting steps.
- Expertise in Linux backup/restore with tar, gunzip, including disk partitioning and formatting.
- Maintained necessary backup of the important files and documented Linux scripts for future reference.
- Troubleshooting all kinds of UNIX problems and assisting users.
- Involved in installing infrastructure and maintaining the performance of server availability.
- Storage system software and functionality and interface components.
- Involved in hardening security on all UNIX servers.
- Involved in troubleshooting shell scripts.
- Knowledge of installing RHEL Server from scratch using Kickstart.
- Created RAID volumes using RAID Controllers and LSI Hardware.
- Install and configure ftp servers running vsftpd 2.6.
- Performed day-to-day LVM operations and System Admin tasks.
- Creating Linux virtual machines using VMware virtual center.

IT Tech Support

Bowie State University | Bowie, MD

March 2010 to March 2012

- Installation, Configuration and Upgrade of RHEL 5.x,6.x OS.
- Daily administration of RHEL 5.x and 6.x.
- Administered Linux servers for several functions including managing Users, Groups and Permission for each Group and Users.
- Create and maintain user groups accounts on Linux Servers.
- Experience in iptables commands includes those used to add, append, delete, or replace rules within a particular chain.
- Installed software packages and configured File systems as per specifications of client.
- Involved in configuration and support of the production environment hosted in a 24x7 setup.
- Troubleshooting application issues on Apache web servers and database servers running on Redhat Linux.

Education

Business Management (Master's degree)

Bowie State University | Bowie, MD

Business Management (BS)

Bowie State University | Bowie, MD

May 2014

Bachelor's degree

Bachelor of Science

Skills
